INVESTMENT STRATEGY

The Fund seeks to achieve long-term growth through investment in the shares of global real estate companies and the global real estate investment trust markets with an overlay of sustainable criteria. The Fund invests mainly in Real Estate Investment Trusts, and company shares from around the world, which are linked to the property market. The Fund will hold mainly the shares of large or medium sized companies, but from time to time may invest in smaller companies. These companies that the Fund invests in give consideration to sustainable ecological and social issues but it will not invest in companies whose business is the management of hotels or resorts or which operates its business contrary to ecological or social standards. The Fund will not track an index. Derivatives (financial instruments whose value is linked to the expected future price movements of an underlying asset) may be used only with the aim of reducing risk or costs, or generating additional capital or income.

Performance is provided net of fees. Past performance is not a reliable guide to future performance. Performance is calculated in GBP on the basis of net asset values (NAV) and gross dividends reinvested.
Source: Sarasin & Partners LLP and FE Fundinfo. Annualised Growth Rate (AGR) is the increase or decrease in value of an investment, expressed as a percentage per year. The source for the annualised volatility measurement is FE Fundinfo and this measurement is expressed using the standard deviation of the Fund's UK GBP monthly returns over the most recent 36 month period. The yields quoted have been calculated using price information as at the date of publication. They are not guaranteed. Benchmark: S&P Developed Property Net Total Return implemented September 2011. No representative benchmark available prior to 2007. The benchmark of this fund has changed over time. Please visit www.sarasinandpartners.com/docs/global/benchmarkhistory for a full history. Prior to 28th November 2016 the fund was called Sarasin IE Real Estate Equity Global (GBP). *Accumulation Dividends are reinvested back into the fund, Income units are paid out to investors.

RISK PROFILE

Lower Risk Potentially lower rewards Higher Risk Potentially higher rewards

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and return. It is based upon how the Fund has performed in the past and you should note that the Fund may well perform differently in the future. The risk category shown is not guaranteed and may shift over time. The higher the rank the greater the potential reward but the greater the risk of losing money. The Fund is ranked at 5 reflecting observed historical returns. The fund is in this category because it has shown higher levels of volatility historically.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CISs are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Ongoing Charges Figure (OCF) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher OCF does not necessarily imply a poor return, nor does a low OCF imply a good return. The current OCF cannot be regarded as an indication of future OCFs. During the phase in period OCFs do not include information gathered over a full year. Sarasin use the OCF figure in place of the Total Expense Ratio (TER).

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees either with respect to the capital or the return of a portfolio. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Waystone Management Company (IE) Limited by or before 12:00 (Irish), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Waystone Management Company (IE) Limited shall not be obliged to transact at the net asset value price as agreed to. Prices are published daily and are available on the Sarasin website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. For any additional information such as fund prices, brochures and application forms please go to www.sarasinandpartners.com.
